Professional Profile

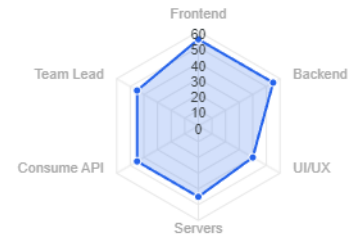

Detail-oriented Frontend Developer with over five years of experience working with JavaScript and related technologies. I possess advanced skills in the **Angular** framework, with an emphasis on large-scale applications that use **RxJs** and **NgRx**. Experienced in creating backends with **Node.js**, using both relational and non-relational databases. I am a great enthusiast of Linux, knowledgeable in AWS, and have extensive experience in CI/CD on private VPS.

FullStack Developer - Teach Lead

Zygnex, Oct 2023 - May 2024 | Remote

I designed interfaces, defined technologies, and created the architecture along with the core code of the frontend applications using Angular and Next.js. I established CI/CD processes and configured connections to VPS for deployments in development environments. Additionally, I was responsible for creating the core code for the backend (Node.js with Express) and microservices

Work Experience

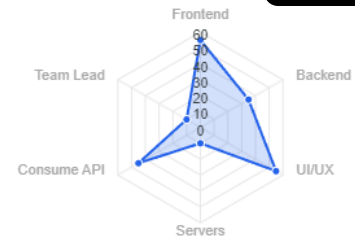

Frontend Angular

MPR Group, Sept 2021 - Sept 2023 | Remote

I developed and designed application IU using Angular, defined the user interface (UI) with Figma, and created CORE logical components of the application. I integrated the RxJS reactivity system and the NgRx state manager. I also took care of API consumption and the programming of the frontend logic.

Work Experience

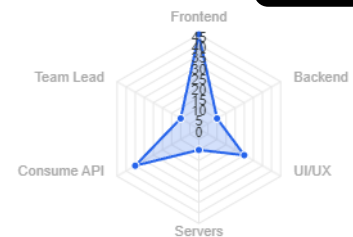

Frontend Angular

Rebus Tech, Feb 2021 - Sept 2021 | Remote

I developed application interfaces using Angular, incorporating the RxJS reactivity system and the NgRx state manager. I handled API consumption and frontend logic programming. Additionally, I implemented styles in accordance with the designs provided in Zeplin and Adobe XD

Frontend Angular & Web Developer

Freelance, Jan 2020 - Feb 2021 | Remote

I developed applications and web landings using Angular and other JavaScript technologies. Using WordPress, I created corporate sites, became familiar with Electron.js for a desktop app project, and delved into CSS, Sass, and style libraries such as Bootstrap and Angular Material.

Work Experience

Aitrain: App for Finetuning AI models

Project

Public

Application for creating fine-tuning files using documents, where files are uploaded and the backend breaks them down into chunks. These chunks then undergo continuous iteration for question creation within a LangChain chain. Once the Q&A format is obtained, Node.js is used with the file system to create .jsonl files. After the task is completed, there is an option to send the files to OpenAI to create a training job. After waiting a few hours, the fine-tuned model with the extracted data will be obtained

Domino App: Tournament Manager.

Project

Public

An application for managing domino tournaments, it allows creating participants, tournaments, and tables, and generates a PDF evaluation format for each table. The app has offline functionality through a local DB that synchronizes with a cloud DB when connected to the internet.

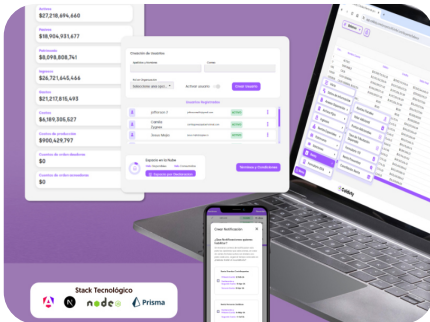

Angular

Electron

Node.js

CouchDB

Colduty: Fiscal SaaS for Business

Project

Private

I designed the interfaces in Figma and the base styles using Sass, then built the core components (Buttons, Modals, Alerts, etc.), which my team later used to create the interfaces. I integrated NgRx into the project and added persistence in localStorage for certain sections that had a very heavy data volume.
